CRITICAL CRITERIA

- _____ Did not immediately direct or take manual immobilization of the head
- _____ Did not properly apply appropriately sized cervical collar before ordering release of manual immobilization
- _____ Released or ordered release of manual immobilization before it was maintained mechanically
- _____ Manipulated or moved patient excessively causing potential spinal compromise
- _____ Head immobilized to the device **before** device sufficiently secured to torso
- _____ Patient moves excessively up, down, left, or right on the device
- _____ Head immobilization allows for excessive movement
- _____ Upon completion of immobilization, head is not in a neutral, in-line position
- _____ Did not reassess motor, sensory, and circulatory functions in each extremity after voicing immobilization to the device

You must factually document your rationale for checking any of the above critical items on the reverse side of this form.
